SUBJECT INDEX VOLUME 28, 1998

adenine deaminase, 539
adsorption, 235
  spectroscopy, 349
aerosols, 195
aldol condensation, 13, 271
amidines, 167
amino acids, 61, 155, 461
  condensation, 167
  decomposition, 167
  extraterrestrial, 413
  negatively charged, 235
  thioester of, 259
aminoimidazole-5-carboxamide, 539
aminoimidazole-5-carbonitrile, 539
ammonia, 1
Antarctic, 425
  ices, 385
antibiotics, 571
arginine oligomerization, 245
autotroph, 311
autocatalysis, 501

banded iron formation, 515
β-amino acids, 47
bioastronomy, 597
biomarkers, 475

calorimetry, 131
carbonaceous chondrites, 385, 425
carbonyl diimidazole, 47, 235
catalysis, 79, 485
chemical selection, 501
cholestanes, 475
chromosome, 215
citric acid cycle, 515
clays, 449
comets, 365, 413
computer modeling, 501
current, 131
cyanide, 1
cyanobacteria, 321, 515

dendogram
  internal nodes, 97
dialanine, 79
diffuse interstellar bands, 349, 365

early Earth, 311, 475
electric discharge, 131
epistomology, 597
1-ethyl-3-(3-dimethylaminopropyl)carbodiimide, 47
eukaryogenesis, 215
eukaryotes, 215
Europa, 583
evolution, 283
  metabolism, 523
  coding, 523
evolutionary tree, 97
extrasolar planets, 597
extraterrestrial organics, 365, 385
extraterrestrial eukaryotes, 583

formaldehyde, 271
formose reaction, 13, 259
functional evolution, 571

genetic code, 123, 283
gene
  clusters, 555
  rearrangement, 555
gene duplication, 539
glycine, 1, 155
glycolaldehyde, 13

HCN, 27, 413, 461
heterochromatin, 215, 583
histidine biosynthesis, 555
homochirality
  biomolecular, 283
hopanoids, 475
hydantoins, 61
hydrogen consumption, 311
hydroxylapatite, 227, 245

illite, 245
imidazole-4-nitrenium ion, 27
interplanetary dust, 385
interstellar
  medium, 349
  molecules, 365
  clouds, 365

iron (II), 1
iron oxides, 449
iron rich clays, 515

lava, 167
lightning, 131

Mars, 449, 475, 583
membrane-catalyzed polymerization, 523
metabolic pathways
  evolution, 555
meteorites, 365, 385
methanogen, 311
methaphosphate, 485
micrometeorities, 385, 413, 425
minerals, 235
mineral catalysis, 245
molecular evolution, 259
montmorillonite
  modified, 485
  edges, 485
  interlayer, 485

nanophase, 449
N-carbamoyl-α-amino acids, 61
nitrite, 1
nitrogen heterocycles, 461
numerical analysis, 501

octaazoporphine, 27
Ohno's law, 215
oligomerization, 47
optical activity, 123
optical properties, 195
organics, 349, 385
origin of life
  time for, 91

PAHs, 349, 385, 425
panspermia, 597
paralogus duplication, 555
peptides, 61, 79
peptide ligation, 245
phosphonic acids, 271
phosphonoacetaldehyde, 271
5-phospho-α-ribosyl-1-pyrophosphate, 539
phosphorimidazolides, 485
photosynthesis, 515
  oxygenic, 321
phylogeny, 571

piperazinedione, 167
polycyclic aromatic hydrocarbons, 349, 385, 425
poly(glutamic acid), 227
polymerization, 235
  β-amino acids, 245
polymers, 461
polyoxocation, 485
Ponnamperuma, 105, 109
power, 131
prebiological reactions, 123
prebiotic chemistry, 271
prebiotic synthesis, 155
prebiotic polymerization, 227
protein synthesis, 571
protocells, 523
protocellular membrane, 523
pyrolysis, 461

reducing atmosphere, 155
ribose, 13
ribosomes, 571
RNA, 485

salt-induced, 79
salvage pathway, 539
scanning probe microscopy, 283
self-replication, 501
silica gel, 167
simulation, 195
soil, 449
solar system, 583
solar ultraviolet light, 321
solid phase synthesis, 227
Strecker synthesis, 1
sugar reactions, 259

thermal desorption, 461
thioester, 259
thiol synthesis, 259
thioredoxin, 515
tholins, 195
Titan, 195
triazines, 461

ultraviolet, 349
universal life

voltage, 131
